課程目標 Course Objectives

This is an introductory course in microeconomics. It focuses on helping students to understand the basic principles of microeconomics and the applications of theories in daily life. Since our life is in large part about making choices subject to limited resources, this course will help you see through how retinol decisions are made by individuals/firms/government and how it might be changed for the better. More importantly, how the market-where "supply" and "demand" interact - works and sets its price will be further elaborated. Despite the fact that the efficient market is not always the case, the government will be proved to be the solution when market failure (such as externalities) occurs.
