課程描述 Course Description				
<p>Introduction of special relativity. Description of nature for motions near the speed of light. Student will learn basic principles and concepts of special relativity and will develop physical intuition for high speed physical phenomena.</p> <p>Introduction of quantum physic. Quantum theory can be described as the study of phenomena involving small length scale (e.g., atomic size). It provides concepts for understanding the microscopic world. Students will learn basic principles of quantum mechanics, such as the wave-particle duality, the uncertainty principle, and Schrodinger equation for its application in a variety of simple application, such as Energy Levels of Electrons in a atom, molecules, solids and others.</p>
