### 課程描述 Course Description

The main purpose of this course is to discuss international trade issues by integrating industrial organization theory. Why do we impose tariffs on imported products? Why do manufacturers outsource? Export or direct investment for a multinational firm, the impact of economic integration on social welfare, the effect of trade liberalization on domestic wages, and the impact of trade liberalization on domestic pollution, and so on.

This course hopes to use the economic knowledge we have learned, coupled with the observation of economic phenomena, to do scientific analysis, and to have a better judgment on public issues.

We are going to discuss the research methods in class, think about the logic of the problem, and set a model to find out the solution.

I hope to train students who are interested in doing research. Students can apply this skill for futher research.

#### 課程目標 Course Objectives

The development of international

trade theory has developed for a long

time, but the assumption of perfect competition or monopoly market structure commonly used in trade theory needs to be revised due to the development of industry. With incomplete competition and information, students can learn the role of "strategy" in trade theory and policy, and apply what they have learned to fields such as environmental economics, regional economics, and find out solutions in the age of digital economy. The most important thing is to cultivate stud ents' ability to find problems, design models, answer questions, and write an essay/report.
