課程描述 Course Description				
<p>This comprehensive course is designed to equip students with a strong foundation in bioinformatics and genomic research. Through a combination of theoretical lectures, hands-on practical exercises, and discussions, students will delve into the core concepts of bioinformatics, the central dogma of molecular biology, Polymerase Chain Reaction (PCR), next-generation sequencing (NGS), basic Linux commands for data analysis, and key considerations in human genome and microbiome research. By the end of this course, students will have the knowledge and skills necessary to explore the vast potential of genomic data in various research applications.</p> <p>Course Objectives:</p> <ol style="list-style-type: none"> <li>1. Define bioinformatics and its relevance in contemporary biological research.</li> <li>2. Explain the central dogma of molecular biology and its role in genetic information flow.</li> <li>3. Comprehend the principles and applications of PCR in molecular biology.</li> <li>4. Understand the fundamentals of next-generation sequencing technologies and their applications.</li> <li>5. Understand basic Linux commands for bioinformatics analysis.</li> <li>6. Gain insights into human genome research, microbiome research, and associated challenges.</li> </ol>				
課程目標 Course Objectives				
<p>This course covers the computational analysis of several important forms of genomic data. Topics include reproducible research principles, genomics workflows, sequence alignment, genome annotation, parallel computing, and metagenomics. Participants will be familiar with the up-to-date analyses of data extracted from both human and bacteria at the end of the semester.</p>
