<b>課程描述 Course Description</b>				
<p>This is the first graduate-level course in theoretical econometrics. It covers statistical topics that are of particular interest in economics and related fields. Basically, it will cover linear regression analysis of single-equation and multiple-equation models. This course is intended as an introduction to econometric methods, and to be a useful prerequisite to further study in theoretical econometrics or applied econometrics.</p> <p>The prerequisites for the course are a basic knowledge of statistics and of matrix algebra. Students should have had at least one semester course in statistics using calculus. There is no specific course prerequisite in matrix algebra, but some familiarity with matrices and the ability and willingness to manipulate them algebraically are required.</p> <p>For each topic, we will have some take-home exercises for your practice. Students are required to do those exercises by themselves. Discussion between students is allowed and encouraged, but just copying others' solutions without any self-thinking will be not helpful to the understanding of econometric topics. The solutions to take-home exercises will be announced in the class one week after take-home exercises.</p>				
<b>課程目標 Course Objectives</b>				
The students must have the ability of training econometrics, according to economic theory to analysis empirical and forecast.				
系專業能力 Basic Learning Outcomes				課程目標與系專業能力相關性 Correlation between Course Objectives and Dept.'s Education Objectives
A	具備財務金融的分析能力 Understanding the financial analysis.			●
B	具備企業財務管理專業能力 Capabilities for business financial management.			●
C	具備英語閱讀溝通協調等能力 English reading ability of communication and coordination.			●
D	具備獨立研究之技能，以進行財金議題研究 Independent research skills to research financial issues.			●
E	具備個人投資理財能力 Investment and financial management.			○
F	具備電腦程式運算及設計能力 Ability of computer programs, algorithms and application.			●
