課程描述 Course Description				
1. 學習隨機過程理論與實務應用之基本知識 2. 利用不確定隨機過程結合相關決策科學之研究議題進行分析 3. 利用實際step by step完成數理模型建構並撰寫小論文投稿研討會或學術期刊為宗				
課程目標 Course Objectives				
This course considers optimal stochastic decision processes from the viewpoint of stochastic programming. It focuses on theoretical properties and on approximate or numerical solution techniques for time-dependent optimization problems with random parameters (multistage stochastic programs, optimal stochastic decision processes). Methods for finding approximate solutions of probabilistic and expected cost based deterministic substitute problems are presented. Besides theoretical and numerical considerations, the proceedings volume contains selected refereed papers on many practical applications to economics and engineering: risk, risk management, portfolio management, finance, insurance-matters and control of robots.
