## 課程描述 Course Description

As there exist voluminous text information over the Internet and are accumulating at an amazing speed,

mining useful information from text becomes increasingly more important. Knowledge extracted from text are essential for marketing,

finance, social behavior analysis and many other fields.

This course will cover important topics in text mining including basic natural language processing techniques, document representation,

text categorization and clustering, document summarization, sentiment analysis, probabilistic topic models, text visualization and financial applications.

I shall emphasize applying textming for financial analysis. Real examples will be provided.

I choose R as the main software as it is free, powerful and very popular for text analytics. Yet, as Python has gained increasing popularity

in text mining and in other fields of big data analytics, I shall also used it as the second programming software.

## 課程目標 Course Objectives

教導學生文字探勘的理論與演算法,內容包含關鍵字抽取、關鍵字權重計算、向量空間模型、二元獨立模型、貝氏分類器、Rocchio分類器、nearest neighbor、k-means分群法與階層式分群法,學生得以用之分析財經資訊。
