課程描述　Course Description

Big Data is a broad term for data sets so large or complex that traditional data processing applications are inadequate.
It offers promises for discovering subtle population patterns and heterogeneities that are not possible with small data.
Yet, the huge sample size and high dimensionality of Big Data create unique computational and statistical challenges,
including scalability and storage bottleneck, noise accumulation, spurious correlation, incidental endogeneity and measurement errors.
These challenges demand new computational and statistical methods.

This course focuses on the salient features of Big Data and reviews newly proposed data analytical and statistical methods to
meet the challenges. It consists of five parts. The first part overviews the main characteristics of Big Data
and the architecture for the analysis. Due to its huge sample size, the hardware and software are essential for
effective analysis of Big Data. The second part covers popular methods for data mining including
A/B testing, crowdsourcing, data fusion and integration, genetic algorithms, machine learning, natural language processing,
signal processing, simulation, time series analysis, visualisation. tensors, multilinear subspace learning.
As almost financial data is in the format of time series, the third part focuses upon time series mining.
Text mining is the focus of the four part as it becomes more and more important for financial Big Data.
Popular textming techniques include information extraction, topic tracking, categorization, clustering, concept linkage,
information visualization, and association rule mining. We shall cover commonly used text mining algorithms including
 k nearest neighbor, support vector machine, Bayesian classifier and K-mean clustering. Final part includes the empirical
 application of Big Data analytics. One cannot really master Big Data technology unless he or she could complete
 analyzing one real big dataset. The airline data includes on-time information of more than 120 millions domestic flights in US
 between 1987 t0 2008 and is a perfect place to start the journey. Also, students are required to analyze a real bank marketing dataset.

  I choose R as the main software as it is free, powerful and very popular for the analysis of Big Data.

課程目標　Course Objectives
大數據有4種特性：（1）數據量巨大；（2）數據類型多樣；(3)數據快數累積；（4）數據價值密度低，因而無法應用傳統的統計方法來分析。本課程針對大數據特性所發展的統計方法做系統性的介紹，包含大數據計算平台，架構與統計軟體；大數據統計模型的建立與分析方法；大數據分析結果的呈現、說明與視覺化；及大數據實證應用，以提昇修課學生分析大數據的統計能力。

	系專業能力 Basic Learning Outcomes	課程目標與系專業能力相關性 Correlation between Course Objectives and Dept.'s Education Objectives
A	具備經濟學、會計學、統計學及數學的基礎能力Basic knowledge of the financial theory Economics, accounting, statistical and mathematica	●
B	具備財務金融基本學理Understanding of the development of the financial disciplin	○
C	具備運用財務金融學理進行分析能力Basic knowledge of financial theory analysi	○
D	具備資料整理、書面呈現或口頭報告之能力Basic knowledge of documentation and presentation skill	●
E	具備財經時事基本分析能力Capabilities for financial analysis of current affairs	
F	具備電腦程式運算及應用基本能力Ability of computer programs, algorithms and applications	●
G	具備英語閱讀溝通協調等基本能力English reading ability of communication and coordination
