課程描述 Course Description

This course is a continuation of Statistics in Psychology II. It aims to provide students with an introduction to the science of making sense out of numerical data. Knowledge of statistics provides statistical literacy that enables people to understand and make sensible judgments based on the analysis of numerical information. This course is designed to teach students how to apply statistical concepts and interpret the results of a variety of statistical techniques from both descriptive and inferential statistics. The major contents covered include estimation and confidence intervals of means, analysis of variance, post hoc procedures, two-way ANOVA, correlation and simple regression, chi-squares tests for goodness of fit and independence, and some simple nonparametric procedures.

課程目標 Course Objectives

To allow students to become more informed persons who can critically evaluate claims that are made in scientific (and less formal) settings.
 To develop an appreciation for the conceptual bases that support statistical evaluation.
 To learn how to interpret and perform several fundamental statistical procedures, as well as to evaluate situations and decide which procedures are appropriate.
 To gain enough knowledge of basic statistical procedures to enable students to apply it to more advanced topics that they will study later in their career.

其他補充說明 (Supplemental instructions)

Since the Covid-19 outbreak, some students will not be able to join us in class. For those students, we would like them to read the required text (the textbook for this class) at home, and to check our E-Learning website (<http://www.elearn.ndhu.edu.tw/>) for the homework assignment every week. If you have any question or problem about this course, you can contact me or the TA of this course (through email or E-Learning). My email address: hclin@gms.ndhu.edu.tw
