課程描述 Course Description

This course is the first course in econometrics at the graduate level. We will cover the basic and modern methods of econometric theory. The course materials will provide the students a foundation for empirical methods in economics. The course is based primarily on the textbook "Econometric Analysis", by W. Greene.

It is assumed that students have taken an undergraduate econometrics course. However, students who have not taken an econometrics course at undergraduate may need to read an undergraduate-level econometrics book written by Wooldridge or Gujarati and Porter. In this course students must learn how to

use R or other packages (for example, Stata, EViews, GAUSS, MATLAB, RATS, SAS, or TSP) to replicate examples in the textbook.
