課程描述 Course Description				
<p>Econometric Analysis is the first-year graduate course in econometrics. The course aims at equipping the students with the knowledge for econometric theory and advanced empirical analysis, especially in the fields of finance and economics. Thus, the focus is placed upon methodology rather than proving statistical theorems. I adopt the books written by William H. Greene as the textbook for its broad coverage and clear exposition as well as Christian Kleiber and Achim Zeileis's Applied Econometrics with R which is excellent for practitioners.</p> <p>I shall allocate parts of the course on regression mode specification and testing as is covered in Stock and Watson (2015). They are extremely useful in real empirical analysis. In addition, I also include some chapters of the lecture notes written by Bruce Hansen, which is an excellent textbook for graduate econometrics.</p> <p>While students may have only limited exposure to econometrics, I shall allocate parts of the course on regression mode specification and testing as is covered in Stock and Watson (2007). They are extremely useful in real empirical analysis.</p>
