	課	程描述 Cours	e Descri	otion				
Digital platforms are becoming increasingly important. Two-sided markets extend traditional consumption mode in many domains today. Examples include short-term accommodation sharing, delivery services, resale- and auction platforms, as well as ride-sharing markets. Importantly, the platform principle bears several particularities that will be examined in this course. Central to the design and operation of digital platforms is the existence of network effects. Two-sided markets include different user types and motives, which will be discussed as well. The aim of the course is to introduce students to the new information economy and the economics of network industries. Students are expected to gain insight into how the specific features of platforms affect the market structure, firms' strategies, and business models, as well as public policy in network industries. At the end of the course, students should be able to use methods and models of microeconomics and industrial organization to understand and analyze the competitive dynamics in network industries. The course' s objective is to convey a basic understanding of digital platforms and platform business models. The course will cover the following subjects: 1. Introduction to platform economics 2. Multi-homing and single-homing 3. Pricing and price strategy in platforms 6. The sharing economy 7. User motives and user types 8. The economics of multi-sided markets and so on.
