課程描述 Course Description				
The objective of this course is about analysis and control of power electronic converters and electric motor drives. Circuits design with power switches and pulse-width modulation techniques is studied, and the proportional-integral (PI) controller and advanced control approaches will be explored in detail. From this course, students will know about analysis and design of power circuits and controllers for dc and ac motor drives.				
課程目標 Course Objectives				
Electric machines have been the workhorses of industry for many years. Combined with the advanced power electronics, microprocessor technologies and control theories, the electric motor drives have become sophisticated, and make many high-performance industrial applications possible. Therefore, for the graduated students major in electric power and control, the knowledge of the modern technologies of the electric motor drives is necessary.
