課程描述 Course Description

In the fundamental Financial Management class, students have learned the essential knowledge and valuation principle concept. This course will cover the core corporate financial issues by examining topics including the risk and return, capital budgeting, capital structure, long-term financing, payout policy, and possibly corporate social responsibility. Students would practice conducting empirical studies for the designated topics, making presentations in class, and delivering their research reports. Students need to learn how to use the database or any public resource to collect data for their research; therefore, performing statistical analysis will be necessary. There is a midterm and final examination and a couple of small research projects. The grading will base on the students' performance in the exams, projects, and their participation/contribution to the class.

課程目標 Course Objectives
