先修課程 Prerequisite						

課程描述 Course Description

and genomic research. Through a combination of theoretical lectures, hands-on practical exercises, and discussions, students will delve into the core concepts of bioinformatics, the central dogma of molecular biology, Polymerase Chain Reaction (PCR), next-generation sequencing (NGS), basic Linux commands for data analysis, and key considerations in human genome and microbiome research. By the end of this course, students will have the knowledge and skills necessary to explore the vast potential of genomic data in various research applications.

Course Objectives:

- 1. Define bioinformatics and its relevance in contemporary biological research.
- 2. Explain the central dogma of molecular biology and its role in genetic information flow.
- 3. Comprehend the principles and applications of PCR in molecular biology.
- 4. Understand the fundamentals of next-generation sequencing technologies and their applications.
- 5. Understand basic Linux commands for bioinformatics analysis.
- 6 Gain insights into human genome research microhiome research and associated challenges

課程目標 Course Objectives

This course covers the computational analysis of several important forms of genomic data. Topics include reproducible research principles, genomics workflows, sequence alignment, genome annotation, parallel computing, and metagenomics. Participants will be familiar with the up-to-date analyses of data extracted from both human and bacteria at the end of the semester.

	系專業能力 Basic Learning Outcomes	課程目標與系專業能 力相關性 Correlation between Course Objectives and Dept.'s Education Objectives
A	具備生命科學相關學科之基礎知識。Having the basic knowledge of life science.	•
В	具備邏輯分析與解決問題的能力。Having the capabilities of logical analysis and problem solving.	•
С	具備資料整合、數據分析與書面及口頭報告之能力。Having the capabilities of data integration and analysis, and the skills of written and poster presentation.	•
D	具備終生學習的能力。Having the capability of lifelong learning.	0
