課程描述 Course Description					
<p>The Human-Ecology discipline attempted to investigate the processes by which the biotic balance and the social equilibrium were maintained once they were achieved. This discipline is also set to understand the processes by which, when the biotic balance and social equilibrium are disturbed, the transitions are made from one relatively stable order to another. The Human Ecosystem Model (HEM) based on the Human- Ecology concepts, provides a strong conceptual basis as social science framework for an integrated social, economics, cultural and environmental purpose. The HEM applications could be utilized by the managers, policy makers, and scholars for sustainable development. The course also provides IAD content to understand the institution importance when we encountered the CPR management issues.</p>					
課程目標 Course Objectives					
<p>1.Enable the students to have knowledge on Human Ecosystem Model 2.Students are able to apply the HEM to their research 3.Provide the learning opportunities for the interdisciplinary research</p>
