課程描述 Course Description				
As technologies like wireless communication and wireless sensor networks advance, the Internet of Things (IoT) has gained significant traction. IoT enables us to sense and collect data from the surrounding environment, allowing for automated, intelligent functions tailored to users. This has led to the development of numerous innovative IoT applications, including smart homes, smart grids, smart transportation, and smart manufacturing. In this course, students will explore key IoT technologies, focusing on the perception layer, network layer, and application layer. Through a combination of experiments and project-based assignments, students will gain practical experience in developing and implementing IoT systems.				
課程目標 Course Objectives				
By introducing the origins, history, architecture, and other related contents of the Internet of Things and wireless communication technology, students can acquire basic concepts first. Together with various experiments and industry cases, they can gain experience in developing IoT-related applications.
