課程描述 Course Description

This course is an introductory econometrics at the undergraduate level. This course aims at giving students basic understanding of econometrics theories and applying econometric techniques of regression analysis. Various econometric models are illustrated by practical examples based on concrete data to achieve this goal. We will cover the following topics: heteroscedasticity, autocorrelation, qualitative response models, panel data, dynamic econometric models, basic time series methods, and forecasting methods. Students will learn how to write programs in R to replicate empirical examples in the textbook.

課程目標 Course Objectives

This course is an introductory econometrics at the undergraduate level. This course aims at giving students basic understanding of econometrics theories and applying econometric techniques of regression analysis. Various econometric models are illustrated by practical examples based on concrete data to achieve this goal. We will cover the following topics: heteroscedasticity, autocorrelation, qualitative response models, panel data, dynamic econometric models, basic time series methods, and forecasting methods.
