課程描述 Course Description

介紹社會科學方法與臨床應用

- 1. 學習科學思維
- 2. 認識研究方法
- 3. 發展研究計畫

課程目標 Course Objectives

This course is designed to cover a survey of scientific methods and some major research designs in the social sciences. Even though data analyses involving the use of computer programs will often be mentioned during lectures, it is NOT the purpose of this course to teach the principles of statistical procedures and the use of these computer programs.

Rather, the focus will be on how a research topic is conceived, coverage of literature, whether the statistical results are appropriately applied to answer research questions and inferences are appropriately made, and how to write a

research paper.

This course also requires lots of scientific writing, which will result in the final form of a quality feasible research proposal. For each of the research methods covered in class, students are expected to recognize the major characteristics and appropriate applicability, standard terminology employed with their associated strengths and weaknesses.
